How to install and setup the Bluetooth connection of g.MOBIlab+ for paired Bluetooth devices, Version 3.14.01
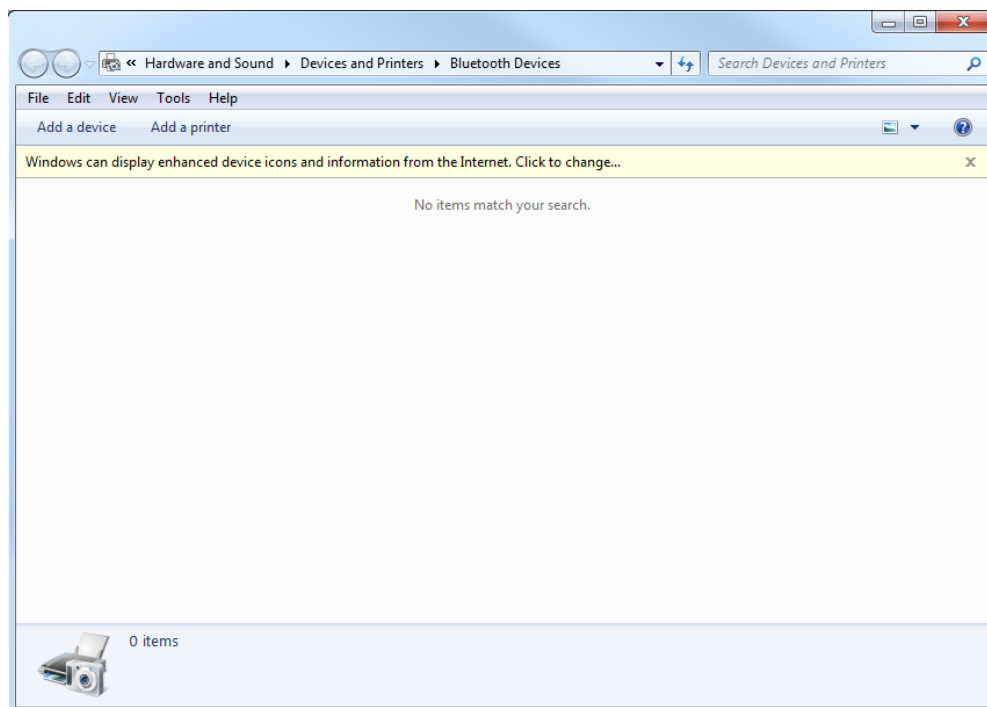

The purpose of this tutorial is to instruct the user to set up and configure the paired Bluetooth connection to g.MOBIlab+ based on the Ezurio Bluetooth USB dongle. This applies to Microsoft Windows 7 Professional English Bluetooth driver stacks. The device pairing has only to be done when the device is the first time installed or anytime you uninstalled g.MOBIlab+.

1. Insert the Bluetooth dongle into a free USB slot. Wait until the Microsoft Bluetooth driver is installed automatically and the Bluetooth icon appears in the Notification area in the bottom right corner of your screen.

    Double-click this icon.

2. Make sure that g.MOBIlab+ is switched on and the green LED is blinking.

3. In the **Bluetooth Devices** dialog click on the **Add a device…**.

4. Select the entry with the g.MOBIlab+ serial number (e.g. MP-2009_01_14) and click **Next**.

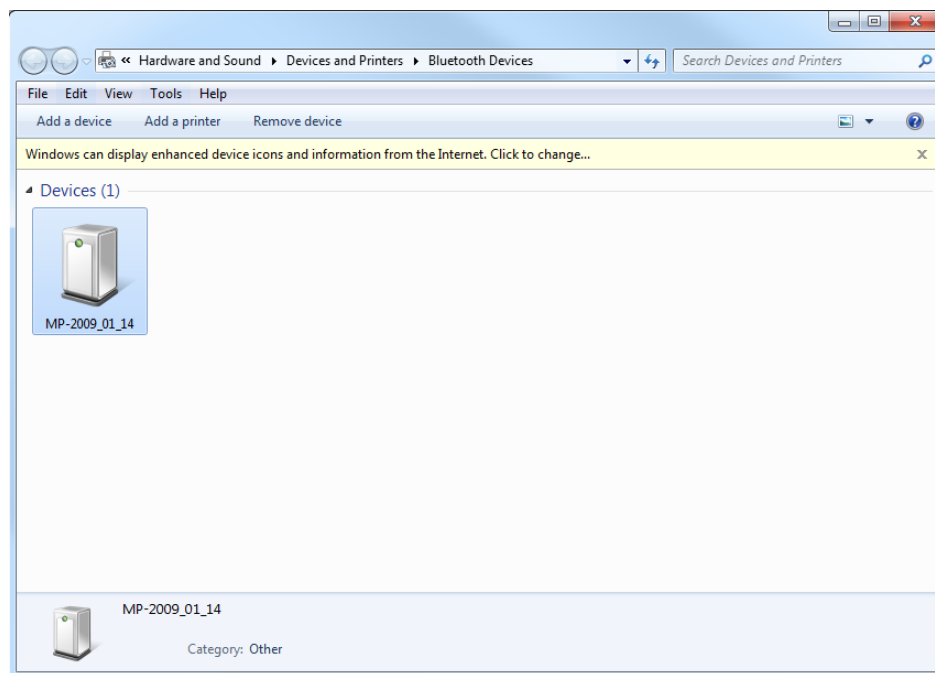

5. A passkey is needed to establish a connection to g.MOBIlab+, which can be found in the battery compartment of g.MOBIlab+ and is normally `1234`. Enter `1234` as passkey and click **Next**.

6. When installation is complete, the dialog below is shown. Click **Close** to exit the wizard.

7. To get the COM port where g.MOBIlab+ is connected, right-click **MP-2009_01_14** and select **Properties**.

8. Select the **Services** tab, there is the serial port of g.MOBIlab+, **Serial port (SPP) 'AT Serial'**, in this case **COM5**.
