Remote Dongle Update

1) Save the file called "gtecHSAPHLupdate.exe " included in this email or

2) Transfer the "gtecHSAPHLupdate.exe " to the PC, where the dongle is used or at least the

hasp-hl drivers are installed

3) Plug in the green hasp-hl dongle, that should be up graded – check the red LED shining,

showing correct function of the dongle

4) Remove all other dongles from the PC

5) Start "gtecHASPHLupdate.exe" -> select the tab called "Collect Key Status Information"

6) Press the "Collect information" button and select where to save the collected info – wait

some seconds

7) Email the saved file (*.c2v) to g.tec (support@gtec.at) or to your contact person at g.tec.

8) We will prepare the upgrade and you will get back the updated file (*.v2c) via email.

9) Start again the program and select the tab called "Apply License Update"

10) Select the file you got from us (*.v2c) and press the "Apply update" button

11) Your dongle will be updated
